

CASE STUDY

Irvin Waldner, Grand Colony

Irvin Waldner, a passionate farmer from Grand Colony, has been in the hog farming industry for two decades. He oversees a substantial hog farm, nurturing 700 sows. His primary business revolves around raising these hogs, ensuring their well-being, and producing quality meat for the market.

Journey & Challenges:

Over the years, Irvin encountered numerous challenges in managing the farm. Ensuring the right environment for the hogs was a constant concern. The hogs' well-being directly impacted the quality of meat, and any deviations in their environment could lead to health issues. Regularly monitoring temperature, ventilation, lighting, and feeding schedules was time-consuming and labor-intensive.

"I'm truly grateful for the support and innovation I've received. My farm operations have never been better."

Irvin had to make multiple visits to the barn daily to ensure everything was in order, a routine that became increasingly taxing.

Realization for Professional Help:

The turning point came when Irvin realized the potential of technology to simplify farm management. He saw the need for a system that would provide real-time updates, reduce manual checks, and offer precision control over the barn's environment.

Meeting & Onboarding:

Upon learning about the AutoFlex Connect system, Irvin decided to give it a try. The initial meeting with the service providers was insightful, and they demonstrated a deep understanding of his challenges. The onboarding process was smooth, with the system being easy to install and configure. During this phase, the service providers made sure to understand Irvin's specific needs and tailored the system accordingly.

"The AutoFlex Connect system has been a game-changer for me. It's not just about convenience; it's about ensuring the best for my hogs."

Positive Outcomes:

Post-onboarding, Irvin experienced a transformation in his farm management approach. The AutoFlex Connect system provided him with detailed reports, accessible via a user-friendly app. He could now monitor the barn's environment remotely, adjust settings, and

even receive updates on the hogs' feeding schedules. The system's "curves" feature was especially beneficial for sows that had recently given birth, ensuring optimal conditions for them. With this newfound efficiency, Irvin felt more confident in his ability to provide the best care for his hogs.

“The AutoFlex Connect system has been a game-changer for me. It’s not just about convenience; it’s about ensuring the best for my hogs.”

Irvin Waldner

Benefit	Outcome
Real-time Monitoring	Reduced manual checks by 80%
Remote Control	Saved 3 hours daily in manual monitoring
Precision Environment Control	Ensured optimal conditions, increasing hog health by 15%
Detailed Reports	Enhanced decision-making and planning
“Curves” Feature	Increased birth success rate by 10%
